Summary

A Software Engineer with 13+ years of professional experience looking for fresh challenges. Worked in a diverse range of projects ranging from AI to IoT applications. Have extensive experience in design, develop and deployment of data heavy, high traffic web portals and server applications. Fluent in multiple programming languages like Python, Java and Javascript along with hands on experiences in multiple frameworks including but not limited to Django, Flask, Codeigniter, Wordpress, Tensorflow, Scikit-learn, Keras etc. Holds a Bachelor and Master degree in Computer Science. Living in Germany since 2011 and received permanent residency.

Experience

Software Developer, Yalwa GmbH; Wiesbaden, Germany | May 2013 – Present

- I have developed a data processing and analysing system for an e-commerce platform with billions of page views per month. I have designed and developed a scalable omni software platform to consume organic and 3rd party data provided through various media including web services (SOAP/RESTful) and proprietary APIs. I am also responsible for analysing the data and developing machine learning models to scrutinize the content and make sure they adhere to content quality policy. As part of my job responsibilities, I have developed a customized spam detection, image classifier, finding text similarities and similar image detection, image captioning and fraud detection with 3rd party APIs, etc. I also conduct lots of research for finding out the best algorithmic model specific to the portals and implement them. I have used python as programming language along with machine learning frameworks like Tensorflow, Keras and Scikit-learn to successfully implement those projects.

Thesis Student, Deutsches Forschungszentrum für Künstliche Intelligenz (DFKI); Kaiserslautern, Germany | April 2013 – February 2014

- I Wrote my Master thesis for the course Master in Computer Science in collaboration with DFKI in the semantic desktop research area. My master thesis was very much implementation related and I got the chance to R&D a feature of a project from DFKI. I have developed a context aware workspace for knowledge workers.
- The backend was supported by the RESTful API developed using Java on top of a MySQL database. The frontend leveraged the modern responsive UI technology with HTML5 and CSS3 to support different OS platforms and devices.

Student Assistant, Fraunhofer IESE; Kaiserslautern, Germany | June 2011 – December 2012

- I have worked on two different projects: CCE (Connected Care for Elderly) and SUSI-TD (Sicherheit und Unterstützung für Senioren durch Integration von Technik und Dienstleistung). I have developed the backend software system integrated to an AI smart home providing help to elderly people with Dementia. My developed software also included support for IoT infrastructure for that smart home to communicate

with several sensors in the house and monitors patients' daily activities, learns about their personal habits and raise an alarm in case of emergency.

- The software modules were developed using the modular technology Java OSGi, business rules using Drools Expert, event management and processes using Drools Fusion, ActiveMQ as the underlying middleware and MySQL databases.

Education

- Master in Computer Science, 2014, Technical University of Kaiserslautern, Kaiserslautern, Germany
- Bachelor of Science in Computer Science and Engineering, 2007, BRAC University, Dhaka, Bangladesh

Certifications and Trainings

- Text Retrieval and Search Engines, University of Michigan and Coursera
- Applied Text Mining in Python, University of Michigan and Coursera
- Applied Plotting, Charting and Data Representation in Python, University of Michigan and Coursera
- Applied Social Network Analysis in Python, University of Michigan and Coursera
- Applied Machine Learning in Python, University of Michigan and Coursera
- Introduction to Data Science in Python, University of Michigan and Coursera
- Big Data with Apache Spark and Python, Udemy

Other Competencies

- Quick learner, tech enthusiast
- Equally fluent in working in team and/or autonomously, currently collaborating across two different organizational units: Tech and Marketing team.
- Worked as intern while writing master thesis in two different cities 100 km apart, which requires planning and task organization to accomplish long-term goal simultaneously.

Additional Information

- Languages: English (Fluent), German (Elementary)
